QGIS Application - Feature request #17962
Add "Add unique value field index" algorithm for multiple fields at once

2018-01-25 08:51 PM - Paolo Cavallini

Easy fix?:	No	**Copied to github as #:**	25858

Description

Repeating the same alg over and over for large tables with many columns to categorize is cumbersome.

It would be good to have an option (possibly a new alg) that allows the user to choose which columns to categorize.

The user could select all the desired columns, and then an auto-generated field name could be made for each new field based on the original column.
