

QGIS Application - Bug report #17964

Pan to feature / Zoom to feature behave exactly the same

2018-01-26 01:38 AM - Kory Roberts

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Attribute table	
Affected QGIS version:	master	Regression?: No
Operating System:	Linux Mint 18.3 Cinnamon	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 25860
Description		
<p>Open attribute table. Right click a row. Select "Pan to feature". Move the map, maybe zoom out some. Right click a row. Select "Zoom to feature". Both behave EXACTLY the same, so far as I can tell. Maybe I just don't understand how they are supposed to function, but I would presume pan is supposed to just pan the map and zoom is supposed to ZOOM IN the map (which it doesn't).</p>

Are you using a point layer?

#2 - 2018-01-26 06:39 AM - Kory Roberts

Yes, point layer. So maybe there is only difference for line/polygon (when 2 dimensions are available to decide zoom level?)...then why have both choices for point layers?
