Description

Sometimes when you delete features, twice as many disappear from the attribute table.

Steps to reproduce:

1. Add the attached layer to a new project

2. Open the attribute table

3. Enable editing

4. Select the first row (see attached screenshot1.png)

5. Press "delete", now 2 rows have disappeared (see attached screenshot2.png)

For the cause of this, see my comments to this PR:

P.S. I used the daily snapshot. I see that today the default widget in some cases has been changed from a range widget to a normal text editor widget.

However, even if using the range widget, I think this bug should not occur.
