

QGIS Application - Bug report #18052

QGIS 2.18 can no longer be installed on Debian unstable

2018-02-06 02:38 PM - Éric Lemoine

Status:	Closed	
Priority:	High	
Assignee:	Jürgen Fischer	
Category:	Build/Install	
Affected QGIS version:	2.18.16	Regression?: Yes
Operating System:	Linux Debian sid	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: wontfix
Crashes QGIS or corrupts data:	No	Copied to github as #: 25948
Description I am trying to install QGIS 2.18 on Debian unstable/sid through the Debian packages on http://qgis.org/debian/ . The installation of the qgis-providers package (a dependency of the qgis package) fails with the following error: qgis-providers : Depends: libqca2-plugin-openssl but it is not installable The libqca2-plugin-openssl package indeed doesn't exist anymore. It was replaced by the libqca2-plugins package in Debian sid.

Already fixed in the nightlies. The release packages will not change until the next point release.

So until 2.18.17 people on Debian unstable/sid cannot install QGIS 2.18 using packages on qgis.org/debian. That's a bit of a shame :)

Correct. See note on <https://qgis.org/en/site/forusers/alldownloads.html#debian-ubuntu>. What's the problem with installing the nightlies instead? You're using unstable anyway.

You're using unstable anyway.

I am using Debian unstable, but I don't want to use QGIS unstable :) The nightlies are QGIS 2.99, no? I want to use QGIS 2.18 on Debian unstable.

Thanks for your responses.

Depends on what repository you choose - there are nightlies of master, but also of the two release branches. See right below the note on <https://qgis.org/en/site/forusers/alldownloads.html#debian-ubuntu>

Oh you mean <https://qgis.org/debian-nightly-release/>. I had missed that. I'll give it a try. Thanks a lot!
