QGIS Application - Bug report #18108
option react to scrolling without being selected

2018-02-15 02:16 AM - Swa Frantzen

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	OsX UI			
Affected QGIS version:	2.18.15		**Regression?:**	No
Operating System:	macOS		**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	no timely feedback
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	26004

Description

The macOS version of Qgis reacts in the user interface where a dropdown menu ("select/option" to use web terminology) reacts to scrolling when the cursor hovers over the field without the field being selected.

No other application on a mac does this ever, so it's extremely distracting when scrolling through settings and having it all messed up just because you're trying to scroll through it.

suggested solution:
stop reacting to scroll events on dropdown menus while hovering over a non-selected dropdown menu (only on those that are selected when scrolling is needed - implement it like browsers do)
