

QGIS Application - Feature request #18129

Processing > Toolbox > GDAL - where fixed layer names are used have a option to use the filename

2018-02-18 11:23 AM - Stephen Eastmead

Status:	Rejected	
Priority:	Normal	
Assignee:		
Category:	Processing/GDAL	
Pull Request or Patch supplied:		Resolution: invalid
Easy fix?:	No	Copied to github as #: 26022
Description		
<p>All the GDAL options I use: merge, virtual raster, fill nodata Hillshade use fixed Layer names which seems to be a nonsense when using Batch input and multiple layers are being created, especially when care has been taken in entering appropriate filenames to differentiate them.</p> <p>I gather from the help files there may be a style workaround so you can dictate the use of filenames for Layer names but there wasn't enough information there for me to follow that possible resolution, but it would be far better particularly for novice QGIS users like me if the option was in the autocomplete pop-up box perhaps.</p>		

History

#1 - 2018-05-16 01:27 PM - Alexander Bruy

- Resolution set to invalid
- Status changed from Open to Rejected
- Category changed from GDAL Tools to Processing/GDAL

This option can be found in the Processing settings.
