

QGIS Application - Bug report #18130

Using uuid generator function in field calculator return the same value for each feature

2018-02-18 01:04 PM - Dominique Lyszczarz

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Field calculator	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed/implemented
Crashes QGIS or corrupts data:		Copied to github as #: 26023
Description		
<p>It seems to me that the correct behaviour here is to compute a distinct uuid for each feature.</p> <p>A work around is to define a custom function like this</p> <pre>@from qgis.core import * from qgis.gui import * import uuid @qgsfunction(args='auto', group='Custom') def getUUID(feature, parent): return '{' + str(uuid.uuid4()) + '}'@</pre>
