

QGIS Application - Feature request #1824

Make the Ctrl++ Ctrl+- shortcuts to zoom, not just change the tool

2009-07-31 06:21 AM - alobo -

Status: Closed	
Priority: Low	
Assignee:	
Category: GUI	
Pull Request or Patch supplied:	Resolution:
Easy fix?: No	Copied to github as #: 11884
Description	
Shortcuts Ctrl++ and Ctrl+- just change to a @+ or - sign, but do not actually zoom

Ctrl zoom (#3154)

- Switch QgsMapCanvas zoomIn and zoomOut to slots
- Change shortcuts to zoom in/out tool to Ctrl+Alt +/-, and make Ctrl + and Ctrl - trigger an immediate zoom in/out

Having Ctrl +/- perform an immediate zoom in/out is standard across almost all apps with a zoom facility, so we should respect that same behaviour.

This change also helps bring canvas and composer behaviour closer together.

(fix #1824)

Agree! It would be useful also for non-field work I think.

Note that for some keyboards Ctrl++ is actually Ctrl+Shift++ or then it *could* be Ctrl+= (this is because many keyboard layouts have the "+" above the "=" sign).

it doesn't zoom and changing the shortcuts doesn't solve the problem.

#3 - 2009-08-04 10:48 AM - Borys Jurgiel

They don't zoom and it's intentional - they just activate the mouse zoom tool.

well... the important is to know it! :)

I think that this behavior is not useful, having a keyboard shortcut that implies using the mouse afterwards does not make sense. By default, I would link Ctrl++ to zoom in and re-center to current cursor position, and leave [[PageUp]] as it is (zooming with no re-centering).

I'm re-opening this because

I find the current behavior (just changing the cursor icon to + or - but not actually doing anything) pretty useless, and, any case, in contradiction with what is said in the Configure Shortcuts lists:

there it says

Action: Zoom in

and the action is not zooming in. Instead, Ctrl+Shift+F does not just change the cursor icon, but actually does what is supposed to do, zooming full.

At least, the next action after Ctrl++ could be just Return, thus avoiding the use of the mouse, which is the goal of a keyboard shortcut. But the ideal would be just zooming in straight away after Ctrl++

How about the first Ctrl++ sets the mouse control and then any Ctrl++ following that does the actual zooming in. That way users who are familiar with just pressing the Ctrl++ and then using their mouse can use it that way, and users who want this feature can still have it. [I know this is old, I am seeing if we can close a few bug listings]

#8 - 2010-05-17 02:11 AM - alobo -

This sounds very reasonable!
