<b>Description</b>	
<p>Hi,</p> <p>I tried to migrate from plugins in Qgis 2 to Qgis 3. I took the usefull group stats plugin as my main example to make transition.</p> <p>Unfortunately, <i>Plugin home page</i> and <i>tracker</i> links for this plugins are dead ( <a href="http://plugins.qgis.org/plugins/GroupStats/">http://plugins.qgis.org/plugins/GroupStats/</a> ), my apologies if I'm not posting in right place.</p> <p>So I downloaded plugin and tried to converted it with changing Qt4 to Qt5 in py script, using 2to3, rebuilding with pyuic5 and pyrcc5 under linux. But now I'm stuck on a QMainWindow error. Where could I have help to solve and understand how to solve it ?</p> <p>Sincerely,</p> <p>Sylvain</p>

You have to wait/ask for the plugin developer to migrate it to QGIS 3. If you want to fork it (but please be sure that the original author really is not willingly to port it to QGIS 3) and you have issues ask in the developers mailing list.
