

## QGIS Application - Feature request #1827

### Keyboard shortcut for selection (alternative left button click)

2009-07-31 06:33 AM - alobo -

<b>Status:</b> Closed	
<b>Priority:</b> Low	
<b>Assignee:</b> nobody -	
<b>Category:</b> GUI	
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> wontfix
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 11887
<b>Description</b>	
A Keyboard shortcut for selection (alternative to left button click with the mouse, ie., Ctrl+Enter) would be handy for, for example, checking or selecting features at using qgis in the field.

- Resolution set to wontfix
- Status changed from Open to Closed

Hi Agus,

maybe I have not understand your request, but the possibility to set a shortcut for "select features" in "edit -> configure shortcuts" is not enough? Please reopen if I am wrong.

##### #2 - 2009-08-09 02:28 AM - alobo -

Yes, but as someone else mentioned in the list, some shortcuts must be enabled by default. I suggest having 2 sets of defaults: one for office use (where using the mouse is convenient) and another one for field use (where using the mouse or the pad must be avoided as much as possible). I would enable this shortcut by default for field use.

(Also, note that my comments are based on 1.1.0, so no chance to test "edit -> configure shortcuts" yet, looking forward to it!)

Agus
