Pull Request or Patch Supplied:	Resolution:
Easy fix?: No	Copied to github as #: 26201
Description	
<p>With QGIS3, the use of temporary files is pretty well implemented. It's a pleasure to use the feature. But since QGIS3 tends to crash pretty often, those temporary files seem to be gone.</p> <p>Actually, many of them are not gone at all: Some processing tools are writing shapefiles into the temporary folder. Is it possible to recover those files automatically on startup, like many other tools (f.e. Word) does?</p> <p>That would save lots of time.</p>
