

QGIS Application - Bug report #18314

QGIS has memory leaks/crashes when zooming

2018-03-02 01:24 PM - Georg Wicke

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	2.18.5	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 26204
Description		
<h2>Steps to reproduce</h2> <ol style="list-style-type: none">1. Open the vector layer provided in this ticket by drag-and-dropping it onto the canvas.2. (Optional) To provoke the leak faster, you can open the layer multiple times.3. Observe the memory usage of QGIS.4. Zoom in and out repeatedly using the mouse wheel. <p>You should see the memory usage increasing massively until QGIS eats up as much memory as it can get.</p> <p>I tried this out with bigger layers at first of course, but it seems to work even with this tiny example. I guess it could be the reason for some random crashes I've been experiencing lately when working with similar (bigger) layers.</p> <p>No plugins were activated.</p>		

History

#1 - 2018-03-02 01:39 PM - Giovanni Manghi

- Status changed from Open to Feedback

Have you tested a more recent version, like 2.18.17 or QGIS 3?

#2 - 2018-08-16 12:02 AM - Giovanni Manghi

- Resolution set to not reproducible

- Status changed from Feedback to Closed

Closing for lack of feedback.
