Affected QGIS version:	3.0.0	**Regression?:**	No	
Operating System:	Linux Mint / Ubuntu 16.04	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**		
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	26276	

Description

In the QGis data source browser tree I can easily see and add tables to the current project. In the context menu is the option "Add Selected Layer(s) to Canvas". There is also a entry "Delete Table" which only deletes one table regardless how many tables are actually selected.

I assumed I can also delete multiple tables in one go, but only the table with the name I clicked on gets deleted.

I'm unsure if this qualifies as bug, but the behavior is not consistent in my opinion. I would expect all selected items are used for the action I can pick from the context menu.

Within the QGis DB Manager I can't do a multi selection, so that is more consistent to me.

QGIS version 3.0.0-Girona
QGIS code revision 0def61c
