| Affected QGIS version: | 3.0.0 | Regression?: No |
| Operating System: | Windows 10 | Easy fix?: No |
| Pull Request or Patch supplied: | No | Resolution: |
| Crashes QGIS or corrupts data: | No | Copied to github as #: 26345 |
| Description QGIS3 doesn't correctly recognize the 1_N relations between two tables without geographical characteristics, set in the project properties. The form of visualization and change data doesn't correctly visualize the data. In version 2.8.16 this has correctly been done. Even if you save a working project version 2.18.16 in version 3, it loses the characteristics and the form doesn't display the data of the child table. Regards Alessandro | | |

History

#1 - 2018-03-27 09:55 AM - Etienne Thomassen

- File qgis3_0_1.PNG added
- File qgis2_18_17.PNG added
- File paths.sql added

I have the same problem, but with one table with geometries. I am using Postgis and have included the SQL to create the tables. QGIS 3.0 does auto-discover the relationships (great new feature!), but the form to edit the attributes of the children within the parents window is not there.

In QGIS 2.18 I get the form I expect (added screenshot), with qgis 3.0 I do not (added screenshot, similar to Alessandro's)

#2 - 2018-03-27 10:34 AM - Michal Jurewicz

On MacOS is the same problem.

#3 - 2018-03-27 09:45 PM - Gerhard Spieles

it is a duplicate from #17525

#4 - 2018-04-14 03:44 PM - nagi hekmati

in qgis 3 :

i have this problem too

my layer and table are stored in postgis

this feature had worked well in prev version

because of importance of this feature thanks for soon correction
