

# QGIS Application - Bug report #18510

## Select within

2018-03-22 12:38 PM - Antonio Sposaro

<b>Status:</b> Closed	
<b>Priority:</b> High	
<b>Assignee:</b>	
<b>Category:</b> Vectors	
<b>Affected QGIS version:</b> 3.0.0	<b>Regression?:</b> No
<b>Operating System:</b> Windows 7	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b> No	<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b> No	<b>Copied to github as #:</b> 26398

### Description

Hello,

When I try to run select\_within for selecting features within one layer which are within another layer, I get an error. Please see the attached error message:

```
2018-03-22T11:37:34 WARNING Traceback (most recent call last):
  File "C:/Users/Administrator/AppData/Roaming/QGIS/QGIS3/profiles/default/python/plugins/SelectWithin/select_within.py", line 243, in run
    self.iface.messageBar().pushWidget(progressMessageBar, self.iface.messageBar().INFO)
AttributeError: 'QgsMessageBar' object has no attribute 'INFO'
```

### History

#### #1 - 2018-03-22 12:43 PM - Nyal Dawson

- Resolution set to invalid
- Status changed from Open to Closed

Needs to be fixed in the plugin, not an issue with qgis itself.

#### #2 - 2018-03-22 12:55 PM - Antonio Sposaro

I don't know if you are aware, but there is a problem in submitting the requests in the plug in session. Category can't be inserted and hence no post can be added

#### #3 - 2018-03-22 05:33 PM - Harrissou Santanna

Which plugin session are you referring to? Nyal was saying that you should report this issue at <https://github.com/HeikkiVesanto/SelectWithin/issues> as it's a plugin issue not QGIS'
