

QGIS Application - Bug report #18522

Qgis works unstably on windows 10 home

2018-03-23 10:51 AM - Андрей Бахарев

<b>Status:</b>	Closed	
<b>Priority:</b>	High	
<b>Assignee:</b>	Андрей Бахарев	
<b>Category:</b>	Processing/QGIS	
<b>Affected QGIS version:</b>	3.0.0	<b>Regression?:</b> No
<b>Operating System:</b>	Windows 10	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	Yes	<b>Copied to github as #:</b> 26410
<b>Description</b>		
<p>Qgis starts normally. It works normally for a while. But then, for no apparent reason, he stops responding. It does not happen on any particular operation. This can happen when you call the properties of an object or when working with a plugin.</p> <p>The bit width of the system (32 or 64) does not affect the problem. When diagnosing a problem in Windows, an "incompatible program" message is displayed.</p>		

History
