

QGIS Application - Bug report #18600

QGIS3: can't cancel ogr2ogr

2018-03-31 06:43 PM - Tobias Wendorff

Status:	Closed	
Priority:	Normal	
Assignee:	Victor Olaya	
Category:	Processing/OGR	
Affected QGIS version:	3.0.0	Regression?: No
Operating System:	Microsoft Windows 7, 64-bit	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 26488
Description It's not possible to cancel ogr2ogr processing by pressing the "cancel" button. I've created a quick workaround using myself in Powershell. It finds the PID of ogr2ogr.exe, kills it and removes the temporary files. Work-around for QGIS (should work in Windows and Linux): get the PID of the subprocess started, kill the process and remove the temporary files (important for a clean workspace). Same behavior in 6ddd9ab0c7 and below.

History

#1 - 2018-06-04 02:01 AM - Nyal Dawson

- Resolution set to fixed/implemented
- Status changed from Open to Closed

Fixed in 3.2 - the cancel button is correctly disabled for OGR/GDAL algorithms (pending a safe cross-platform way to kill these commands)

#2 - 2019-01-29 08:00 AM - Alexander Bruy
