

QGIS Application - Bug report #18608

Layer tree embedded widgets do not show up unless you move layer

2018-04-02 12:14 PM - Richard Duivenvoorde

Status: Closed	
Priority: Normal	
Assignee: Alessandro Pasotti	
Category: Map Legend	
Affected QGIS version: 3.1(master)	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: Yes	Resolution: fixed/implemented
Crashes QGIS or corrupts data: No	Copied to github as #: 26496
Description	
<p>To reproduce:</p> <ul style="list-style-type: none">- open new project- add osm xyz layer- open properties of the xyz layer- Go to Legend tab, and move 'Opacity slider' from 'Available widgets' to 'Used widgets'- click Apply and OK <p>Nothing visually happens, the Transparency slider (with me here) does not show up in the Layers panel. Even, moving the map, opening the treeview by clicking the little black triangle in the Layers panel, the slider widget does NOT show up. Resizing the window, resizing the layer panel: no widget.</p> <p>Only when you 'drag' the one layer some millimeters in the Layer Panel, it apparently is repainted and the slider appears.</p> <p>Mmm, testing in 2.18.1 now, it has the same issue. Apparently the repainting/drawing is changed/optimized?</p> <p>(as I was thinking about a layertree widget for wmts/xyz layer to have a button 'show proper scale' (see user mailing list), I thought this to be fixed first :-)</p>
