

QGIS Application - Bug report #18611

3.0.0 Cannot "run as system", worked in previous versions

2018-04-02 11:51 PM - Thomas Pemberton

Status:	Open	
Priority:	Normal	
Assignee:	Thomas Pemberton	
Category:	Windows Package	
Affected QGIS version:	3.0.0	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 26499
Description		
<p>I am trying to deploy QGIS 3.0.0 on our campus. We use Microsoft SCCM to deploy the software in a scripted fashion to many computers on campus.</p> <p>I can run your install fine under an admin account using /S. Microsoft SCCM uses the "local system" (i.e. god account) to install it on the computer. When the install runs through Microsoft SCCM using /S it does not install the product at all and exits the install almost immediately.</p> <p>I am willing troubleshoot more but I have not been able to find a way to get QGIS to spit out an install log either...</p>
