

QGIS Application - Bug report #1862

layer editing icon doesn't show on layers loaded from a project

2009-08-06 06:33 PM - Steven Mizuno

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Map Legend	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 11922
Description		
<p>For items on Layers panel: with the recent return of indicating that a layer is being edited, which works on layers added to a project, editing is not indicated for layers loaded from a project file.</p> <p>Also, the layer items bounce a bit because the edit icon is a different size from the layer type icon, which is a minor annoyance. Perhaps the editing icon could be overlaid on the type icon, which is how it used to be.</p> <p>These were observed on Windows XP, but I believe all platforms are affected.</p>

Hi,

this is duplicate of #1760, that I confirmed under Linux, so now we know it is a issue on probably all platforms.
