

QGIS Application - Bug report #18642

Geometry tools Check validity unable to distinguish between different memory layers

2018-04-05 05:41 PM - amedeo fadini

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Processing/QGIS	
Affected QGIS version:	2.18.17	Regression?: No
Operating System:	Windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 26530
Description		
<p>Given a QGIS project (2.18.17) with two memory layers of type polygon with the same CRS and different layername, I've tried to use Vector Geometry Tools &gt; check validity on both layers but it performs the check and shows results always in the same layer.</p> <p>No problem with two layers with different SRS.</p> <p>In attached screenshot memory2 and memory3 has the same errors, output results against memory2 shows results of memory1</p>
