

QGIS Application - Bug report #18686

[Layouts] Delete the map assigned to a scale bar item does not "invalidate" the scale bar

2018-04-10 02:21 PM - Harrissou Santanna

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	3.1(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 26574
Description		
<p>I don't quite know what would be the right behavior but...</p> <p>Create a map item and an associated scale bar.</p> <p>Now, delete the map item</p> <p>The scale bar still shows the same size but its "map" property is set to empty.</p> <p>This could mislead people in case there's another map item in the page.</p> <p>I don't know if the map property should be set to the "next" other map item in the layout page but this issue also might also concern:</p> <ul style="list-style-type: none">- map legend if i delete the map item- attribute table if the layer no longer exists (didn't check this one's behavior though)- or any data-defined item that makes use of another item properties (or variable) <p>Maybe we need to display something in the GUI to alert the user that a setting has been corrupted (or check whether the map item is not assigned and alert when trying to remove or ...)</p> <p>OR maybe this should be a feature request.</p>
