

QGIS Application - Bug report #18727

Save As kml crashes with sybology

2018-04-16 06:35 AM - Kim Frankcombe

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	3.0.0	Regression?: No
Operating System:	Ubuntu 16.04	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 26614
Description Saving an object, imported to QGis as a delimited text file, as a kml causes QGis to crash if anything other than No Symbology are selected. The data points were displayed using a Categorised symbology and symbols from the default Simple Marker set. Selecting "Feature Symbology" causes QGis to silently crash almost immediately, whereas selecting "Symbol Layer Symbology" causes QGis to hang for a while (window goes dark) then crash, Apport then comes up with the send report dialogue.		

History

#1 - 2018-04-16 07:10 AM - Nyall Dawson

- Resolution set to fixed/implemented
- Status changed from Open to Closed

Fixed in 3.0.2
