# QGIS Application - Bug report #18731
# [Layouts] Removing a page of the layout moves its content to first page and breaks that page layout

| **Pull Request or Patch supplied:** | | **Resolution:** | |
| **Crashes QGIS or corrupts data:** | No | **Copied to github as #:** | 26618 |

**Description**

Select a multi page layout with items added here and there.

Select page two, right-click... remove page

The page is removed but without any notification, its content is moved to the first page, possibly corrupting that page layout.

When removing a page, a dialog should pop up, asking whether you want to

1. remove also the content
2. keep the content (they'll be out of a page bounds)
3. move the content to a page you'd select

But it shouldn't be blindly and silently moved to another page, breaking its layout. As far as I remember (no QGIS right now to check) in 2.18 page was removed and items stayed at their place.

**History**

**#1 - 2018-12-28 12:06 PM - Paolo Cavallini**

*- Easy fix? changed from No to Yes*

*- Affected QGIS version changed from 3.1(master) to 3.4.3*

Confirmed on 3.4.3. A confirmation dialog appears, but objects are silently moved to the remaining page. Possibly changing the message in the dialog (your object will be moved to the previous page) is enough.
