

QGIS Application - Bug report #1874

qgis doesn't run in Fedora 10 or Fedora 11

2009-08-13 11:28 AM - tmort -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Build/Install	
Affected QGIS version:	Regression?: No
Operating System: Fedora	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 11934

Description

I recently installed qgis on a computer running fedora 10 using yum. There were no error messages during the install. when I tried to run the program, nothing happened. I tried again using Fedora 11 with the same results.

System Information:

Release

Kernel Linux 2.6.29.6-217.2.3.fc11.i586

Hardware

Memory 2.9 GiB

Processor 0: Intel Pentium Dual CPU T2370 1.73GHz

Processor 1: Intel Pentium Dual CPU T2370 1.73GHz

System Status

Available disk space: 131.8 GiB

History

Did you use the packages listed on QGIS' download page or from some other source?

AFAIK there is currently no QGIS' developer using Fedora and I suspect this is a packaging problem, so you might want to report it through the proper fedora channels first.

I've filed a report with Fedora, thanks
