

## QGIS Application - Feature request #1882 different snapping behavior for each editable layer

2009-08-19 05:35 AM - Marco Lechner

<b>Status:</b> Closed	
<b>Priority:</b> Low

<b>Category:</b> Digitising	
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 11942
<b>Description</b>	
<p>I like to have an option to have different snapping options for different editable layers. It would be very useful to be able to make layer A snapping to layer X while editing and layer B snapping to layer Y and in addition to that having layer C not to snap to any layer.</p> <p>This is not the same then the already existing snapping behaviour which allows to snap to various layers in different ways but without taking care of which layer is actively edited.</p>	

### History

**#1 - 2009-11-27 09:10 AM - Paolo Cavallini**

- Resolution set to fixed
- Status changed from Open to Closed

If I understand this correctly, the issue has been solved in current trunk. Please test and reopen the ticket if necessary
