QGIS Application - Bug report #18966
WMS refresh crash

2018-05-16 09:51 PM - Dion Duran

Status:	Open			
Priority:	Normal			
Assignee:				
Category:	Web Services clients/WMS			
Affected QGIS version:	3.0.2		**Regression?:**	No
Operating System:	Windows 10		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	
Crashes QGIS or corrupts data:	Yes		**Copied to github as #:**	26797

Description

QGIS crashed when hitting the refresh button to refresh a WMS connection. It has happened at least twice. Does not happen every time refresh button is pressed.
Report is below.

Update. The crash has happened twice again since I posted. I think I have tracked down the offending action. I am creating new layers into GeoServer. Then in QGIS I refresh the WMS connection to see the new layers. That is when it crashed. I have tried it twice and crashed both times, creating totally new layers each time. After the crash, I reopen QGIS and the new layers are accessible in the WMS connection.
