Hi,

I am the current maintainer of ProfileTool plugin. We have tracked this issue down to what seems a regression on interpolate function from a QgsGeometry object (actually when trying to interpolate a line built with a single point).

You can reproduce the crash with the following code snippet on QGIS Python console (in QGIS 3.0.2 it crashes, in QGIS 2.14 returns None):

1. Crashes on QGIS 3.0.2:

```
points = [QgsPoint(*p) for p in ((10, 10),)]  
geom = qgis.core.QgsGeometry.fromPolyline(points)  
interp = geom.interpolate(0)
```

We are updating the plugin asap to avoid this issue.
