I am also having this issue. I notice it after upgrading from a version of 2.18 to 3.2.0. However a clean install on another computer with Arch and it is working fine. I have tried to uninstall and reinstall QGIS, and I have also removed all my profile folders from .config, .local, and ~/ for QGIS and it is still happening. Had you found a fix for this?

#2 - 2018-08-09 05:35 PM - Borys Jurgiel

Did you try to purge the /usr/share/qgis directory? A similar crash on Windows seems to be caused by some Python 2 remainders.

#3 - 2018-08-09 05:54 PM - Nathan Allen

Yeah, I confirmed that /usr/share/qgis was removed when I did the uninstall. and it seems to be recreated fine with the reinstall. I am building 3.3 from git right now to see if it happens on that version as well.

#4 - 2018-08-09 07:55 PM - Nathan Allen

Ran into #19476 while compiling. Once I get that straight I can test, for now is there anything else I can try with 3.2.0 that would be helpful here?

#5 - 2018-08-09 11:47 PM - Nathan Allen

I have not been successful in building from git, however my workaround for this issue now is to install my plugins from zip files downloaded from the online repo. Seems to work for what I need at least.

- Status changed from Open to Feedback

Please try on QGIS 3.4.1, if the issue is still valid change the affected version, thanks.

#7 - 2018-11-10 12:26 AM - luke allen

Tried it on Arch with qgis 3.5.0 dev

Still broken. Also i cannot go to the About window. When i click on the about button it pops a window open and then the whole application Crashes.

Probably this bug is related to QtWebKit. It looks similar to [this one](#)

More detailed log:

```
QNetworkReplyHttpImplPrivate::_q_startOperation was called more than once QUrl("https://plugins.qgis.org/plugins/plugins.xml?qgis=3.2")
[New Thread 0x7fff78e8d700 (LWP 16447)]
[Detaching after fork from child process 16448]
[New Thread 0x7fff6b7ff700 (LWP 16449)]
free(): invalid pointer
```

Temporary solution that works in my case (QGIS 3.4.2 + Arch Linux):

1. check Java versions you have installed
2. leave only java-8-openjdk and remove others
3. try to run QGIS

#9 - 2019-03-08 11:53 AM - Giovanni Manghi

1. check Java versions you have installed
2. leave only java-8-openjdk and remove others
3. try to run QGIS

I fail to see how this could help or be the issue, we are not java or anything related to java:)

#10 - 2019-03-08 11:53 AM - Giovanni Manghi

also this is not (of course) a general issue.
