Easy fix?:	No	
Description		
<p>In the Settings --> Options dialog there is a "Print layout" tab you can use to configure some default values for any new print layout. I think we should really improve these features with adding some items such as:</p> <ul style="list-style-type: none">- Page size (i can not recall the last time I use A4 format, but it's the default, hence i have to change it each time)- Layout dpi: by default, it's 300 (too much for me). Could be nice to have it changed at a single page instead of having to change it at each export- the atlas raster format to export to- I'd say default font size, given that there's a default font (which btw is not applied to new layouts)- ... others?...
