

QGIS Application - Bug report #19061

QGIS does not start up - please help!

2018-05-29 05:07 PM - Markus Urbscheit

Status: Closed	
Priority: Normal	
Assignee:	
Category: Windows Package	
Affected QGIS version: 3.6.0	Regression?: No
Operating System: Windows 10	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 26891
Description	
<p>Dear QGIS developers, I'm desperate! Since QGIS 3 I cannot run the program any more: At startup I just get error messages (see attachments) - nothing happens afterwards. QGIS doesn't load. So unfortunately no QGIS 3 for me yet... This was the case in version 3.0.1, 3.0.2 and now also 3.0.3. Could anybody give me an answer what could possibly solve the problem in case it is a local issue? I uninstalled QGIS properly every time before installing a new version. I appreciate any answer. Thanks a lot!</p> <p>I already reported this problem (similar error messages) in issue #18980 and #18326</p> <p>I never had this problem in any former (2.X) version.</p> <p>[Edit]</p> <p>Summary of message box captures (BTW using Ctrl+C should also copy the contents, but in text, which would make it easier for us):</p> <ul style="list-style-type: none">- Der Prozedureinsprungspunkt "?wheelEvent@QListView@MEAAXPEAVQWheelEvent@@Z" wurde in der DLL "C:\PROGRA~1\QGIS3~1.0\apps\qgis\bin\qgis_app.dll" nicht gefunden.- Der Prozedureinsprungspunkt "?authenticationMethod@QSslCipher@@QEBA?AVQString@XY" wurde in der DLL "C:\PROGRA~1\QGIS3~1.0\apps\qgis\bin\qgis_gui.dll" nicht gefunden.- Der Prozedureinsprungspunkt "??0QColor@QEAA\$\$QEAV0@Z" wurde in der DLL "C:\PROGRA~1\QGIS3~1.0\apps\qt5\bin\qwt6.dll" nicht gefunden.- Der Prozedureinsprungspunkt "?toLower@QString@@QEGBA?AV1@XZ" wurde in der DLL "C:\PROGRA~1\QGIS3~1.0\apps\qt5\bin\qca-qt5.dll" nicht gefunden.- qca-qt5.dll and qwt6.dll only found in "C:\OSGeo4W64\apps\Qt5\bin" and "C:\Programme\QGIS 3.2\apps\Qt5\bin"- qgis_app.dll and qgis_gui.dll only found in "C:\OSGeo4W64\apps\qgis\bin", "C:\Programme\QGIS 3.2\apps\qgis\bin" and "C:\Programme\QGIS 2.18\apps\qgis-ltr\bin"- dependency walker reports inconclusive because they don't have the full paths.

History

#1 - 2018-05-29 05:13 PM - Giovanni Manghi

In the meantime: use the LTR version (2.18) for mission critical/daily tasks. QGIS 3 will become LTR (aka "stable") only with the 3.4 release.

#2 - 2018-05-29 05:18 PM - Markus Urbscheit

Thanks Giovanni. So I will wait patiently for 3.4 and use 2.18 until then. Thank you all for doing this great job of developing QGIS. Cheers Markus

#3 - 2018-05-29 06:21 PM - Harrissou Santanna

- Status changed from Open to Feedback

@Markus, what happens if you open your file browser up to the bin folder shown in the message and double-click the qgis.bat file associated?

#4 - 2018-08-16 12:04 AM - Giovanni Manghi

- Status changed from Feedback to Closed

- Resolution set to not reproducible

Closing for lack of feedback.

#5 - 2018-08-16 10:47 AM - Markus Urbscheit

- Status changed from Closed to Reopened

Sorry folks for not reacting earlier...

I just installed qgis Bonn now. The issue remains as posted here and in earlier posts (#18326 and #18980). I still cannot open qgis at all, I just get the error messages attached here.

On Harrissou Santannas question: if I doubleclick qgis.bat in the bin folder just the same thing happens.

QGIS 2.18 LTR works fine. So what could make the difference that causes this problem?

After months of waiting an no solution I am longing to use QGIS 3...

Thanks for any help.

Markus

your is a case of "DLL hell":

in the error messages you posted you find reerences to .dll files, if you look into your "system32" folder (of your windows installation) you-ll find a copy of them. They should not be there. There were placed there by a software installer (not qgis). QGIS also install a copy of such dlls, but it keeps them into its installation directly. When you launch qgis (as any other windows program) it looks for the dlls it needs first into system32, it finds them but are not the right version ones, so it fails. If you want your qgis to start you should rename/delete such dll files, of course one or more programs you installed will stop to work. Blame not QGIS for this.

Thank you Giovanni. I just checked the System32 folder for some DLLs - there are non of them!

The affected dlls - now with version Bonn are:

qpps\qt5\bin\qca-qt5.dll

qpps\qt5\bin\qwt6.dll

qpps\qt5\bin\qgis_gui.dll

qpps\qt5\bin\qgis_app.dll

So it seems not to be a "DLL-hell" issue. What else could it be?

Attached you find the error messages from version Bonn.

No dlls to find in windows folder, except in regular qgis and OSGeo folders, see attached screenshots of search

Better candidates are the OpenSSL DLLs or the Qt-DLL themselves. You could try [dependency walker](#) to find the culprit.

Better candidates are the OpenSSL DLLs or the Qt-DLL themselves. You could try [dependency walker](#) to find the culprit.

Thank you Jürgen. I opened the dlls with dependency walker. I cannot interpret the results/error messages since I am just a normal desktop user an not familiar to dlls at all. So I attached the results of dependency walker - maybe you can say something about them.

I am really near to give up... should I clean reinstall windows? That would cost me much too much time...

#15 - 2018-11-11 11:42 AM - Jürgen Fischer

- Description updated

#16 - 2018-11-11 12:32 PM - Jürgen Fischer

Steps to check:

1. Download [dependency walker](#)
2. Extract it to your OSGeo4W install's bin directory %OSGEO4W_ROOT%\bin (usually C:\OSGeo4W64\bin)
3. Edit %OSGEO4W_ROOT%\bin\qgis.bat (or for nightlies qgis-rel-dev-g7.bat or qgis-dev-g7.bat) and add the following line right above the last line and save it:

```
for %%i in (qgis_app.dll) do depends /c /f:1 /ot:%TEMP%\%%~ni.log %%~$PATH:i
```

4. Then double click the file you just edited in explorer to start it
5. This will produce the error message as before, but beforehand a report about your DLLs will have been created in %TEMP%\qgis_app.log (usually AppData\Local\Temp in your %USERPROFILE%)

That report should have clues about what's going on.

- *Description updated*

#18 - 2018-11-11 05:33 PM - Jürgen Fischer

Jürgen Fischer wrote:

| *That report should have clues about what's going on.*

Verify for instance that DLLs like QT5*.DLL, SSLEAY32.DLL and LIBEAY32.DLL come from an directory within the QGIS installation and not from windows' system32. These mask the DLLs belonging to QGIS and shouldn't be there and be moved to the software that installed them there.

- *Status changed from Closed to Reopened*
- *File qgis_app.log added*
- *Subject changed from QGis 3.0.3 does not start up - please help! to QGis 3.6 does not start up - please help!*
- *Resolution deleted (no timely feedback)*

Jürgen, a friend of mine just installed 3.6 and got a "could not load qgis_app.dll" error. He had 3.4.4 working flawlessly on his computer. That's odd.

Anyhow, I was able to get access to his computer and output a dependencies log, which I'm attaching here. I've looked into it and can't spot anything wrong. Hope your expert eyes can find this helpful.

#21 - 2019-02-25 07:19 AM - Mathieu Pellerin - nIRV

OK, Nyaal spotted out the culprit; the log shows that EXIV2.DLL is missing. Adding the DLL from <http://www.exiv2.org/download.html> into the QGIS bin directory works.

So, the problem - with 3.6 - is a missing DLL in the standalone package.

#22 - 2019-02-25 08:40 AM - Jürgen Fischer

- *Affected QGIS version changed from 3.0.3 to 3.6.0*

Mathieu Pellerin - nIRV wrote:

| *So, the problem - with 3.6 - is a missing DLL in the standalone package.*

This should already be fixed.

#23 - 2019-02-25 08:41 AM - Jürgen Fischer

- Resolution set to worksforme

- Subject changed from QGis 3.6 does not start up - please help! to QGis does not start up - please help!
