

QGIS Application - Bug report #19093
Incorrect colour displayed on rasters

2018-06-02 06:49 AM - Patrick Dunford

Status: Open	
Priority: Normal	
Assignee:	
Category: Map Canvas	
Affected QGIS version: 3.0.3	Regression?: No
Operating System: Lubuntu 18.04	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 26923
Description The colour displayed on the rasters is yellow instead of orange. The rasters have been altered from the original with Gimp. They display correctly in lots of image viewers, but not in Qgis.

Using the same project as above, the picture attached is how it renders in 3.03 running on another system (Manjaro Linux). Again it is just the rasters that have been customised in Gimp, and the rasters as regular jpeg images view just fine in an image viewer on the same computer.

A new version of Gimp was recently released, and it's difficult to know if that has any bearing on this situation. However, creating a new project file and adding the same rasters to it results in a normal display instead of a garbled one.

The Manjaro issue only occurs on Manjaro. Not able to replicate on any other platform so far (tried Ubuntu and Fedora).

So I just downloaded some new aerial photography from the internet and I open it in a 2.18 project and the same thing happens with the funny colours. So this also happens in 2.18 and happens with files that have not been altered by me in any way. I can tell you for a fact that the colours you can see in this screen shot attached are totally unnatural, the dark blue for the harbour is supposed to be ocean colour or blue-green, and the yellow buildings, you would find, are actually red.

Pretty much everything I can test with will show this problem.
2.18.17, 2.14.22 and a version of 2.99 going back 18 months.
