

QGIS Application - Bug report #19109

[Diagrams] Show diagram data-defined option seems broken

2018-06-04 06:47 PM - Harrissou Santanna

Status: Closed	
Priority: Normal	
Assignee:	
Category: Diagrams	
Affected QGIS version: 3.1(master)	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 26939

Description

In the layer properties dialog, Diagrams --> Rendering tab, if I apply to the "Show diagram" data-defined widget the following expression "CODE_DEPT" = '52' it show the diagram for the corresponding feature.

But if I write "CODE_DEPT" > '52' it shows all features diagrams even those that do not fill the condition.

Moreover, I must admit that I fail to understand the subtlety between this option and the one next to it, ie "Always show" (which, btw does not seem to return expected result neither).
