Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	27029	

Description

I want to export my map as mbtiles. I have tried to use the qtiles plugin, however, the program crashes when I press "run". Is there any other way I can export mbtiles? I have also downloaded the 3.0.3 version, but I cannot fint the qtiles plugin there, so if there is a way to do this in the newes version, please let me knoww.

Hi Marte,

If you have troubles with a plugin, that is if QGIS crashes because of a plugin, you have to ask the plugin author to fix his plugin (often QGIS itself cannot handle all ways to kill it).

If you have a raster loaded, you can use 'export as', and one of the options is MBTiles. Not sure if this is what you look for though.

This is not a Q&A list, so if you have this kind of questions, please ask on the dev or user mailing lists.

Closing this one now.
