QGIS Application - Bug report #19249
The "effect neon" symbol breaks layer type and edit status icons in the Layers panel

2018-06-22 03:14 PM - Harrissou Santanna

Status:	Open		
Priority:	Normal

Category:	Map Legend		
Affected QGIS version:	3.1(master)	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	27077

Description

In the attached image, the New Scratch Layer2 is a line layer to whom I apply the default "effect Neon" line symbol.
I would have expected it being more prominent (and not just show something like a point)

Testing more: when in the layer properties dialog you set the symbol and apply, the Layers panel looks great until you close the properties dialog and select another layer.
Also toggling the layer to edit does not show the pencil icon over the reduced geometry type icon.

Occurs also in 3.0
