QGIS Application - Feature request #19365 Layout legend sub-layer can't be shown

2018-07-09 05:08 PM - d quintao

Pull Request or Patch supplied:		Resolution:	invalid
Category:	Map Legend		
Assignee:			
Priority:	Normal		
Status:	Closed		

Copied to github as #: 27193

Easy fix?: Description

With the Layout Legend, when a layer is under a group you can't select that layer symbol to appear by itself, and same thing for a layer that has categorized symbols, you can't select just one symbol from the layer.

Or am I missing something?

- Resolution set to invalid
- Status changed from Open to Closed

Yes - you need to uncheck "auto update", and then remove all the categories you don't want from the list.
