| <b>Description</b>  |           |                                     |
| <p>I have a rule based classification where the symbol is the same but the filter and scale dependency are different across classes.</p> <p>When I do a GetLegendGraphic I get each class in the legend but I only want one (since each one is the same)</p> <p>A good way to achieve this might be a 'hide class' checkbox in each rule, or even 'hide in composer' and 'hide in GetLegendGraphic'</p> |           |                                     |
