

QGIS Application - Bug report #1938

Deleted features in shapefile reappear with "ERROR" in attribute table.

2009-09-20 10:07 AM - cgsbob -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Vectors	
Affected QGIS version:	Regression?: No
Operating System: Debian	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 11998

Description

I am using r11960 on Ubuntu amd64.

I selected several features in the "Open Attribute Table" window and clicked on "Delete Selected". These features are removed from the attribute table, but reappear after I click on "Toggle Editing". The word "ERROR" appears in the attribute fields, and the following message in the shell:

```
Debug: /home/bobm/src/gis/qgis_svn/src/app/attributetable/qgsattributetablemodel.cpp: 275: (rowTold) rowTold: row 7 not in the map
```

```
Debug: /home/bobm/src/gis/qgis_svn/src/app/attributetable/qgsattributetablemodel.cpp: 275: (rowTold) rowTold: row 7 not in the map
```

```
ERROR 1: Attempt to read shape with feature id (-999999) out of available range.
```

History

#1 - 2009-09-20 10:18 AM - cgsbob -

I should add that when I try to deleted the records that have "ERROR", qgis becomes unresponsive. CTRL-C does not work but CTRL-\ works.

#2 - 2009-09-26 12:07 PM - Giovanni Manghi

I cannot replicate the problem under ubuntu 32 bit with qgis trunk. Can you post a sample to be tested by others?

#3 - 2009-10-12 02:27 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Open to Closed

Still not replicable here. Please reopen if necessary, but if possible attach problematic sample data.
