

QGIS Application - Feature request #19408

Shapefile displayed layer name based on style

2018-07-13 10:27 AM - Maxime RIOU

Status:	Open	Resolution: Copied to github as #: 27236
Priority:	Normal	
Assignee:		
Category:	Map Legend	
Pull Request or Patch supplied:	Yes	
Easy fix?:	Yes	
Description		
<p>When using styles and presets in QGIS 2.18, the shapefile can change colors but the displayed name remains the same. I would like to have a displayed name changing when changing the style / preset.</p> <p>For example: "township", a shapefile of polygons representing townships could have "style 1: density of population : tonwship" and "style 2: number of household / township" .</p> <p>If I want two composers with these two different maps, the automatic legend will have only one title which is the displayed name.</p>
