QGIS Application - Bug report #19477
Multipolygons layer is empty in the attribute table

2018-07-24 05:30 PM - Etienne Trimaille

Status:	Closed		
Priority:	High		
Assignee:	Even Rouault		
Category:	Processing/OGR		
Affected QGIS version:	3.2	**Regression?:**	Yes
Operating System:	Ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	27305

Description

I have some issues while loading some OSM layers in QGIS 3.2:

  - start a new project:
  - drop the osm file enclosed
  - choose only the multipolygon file => everything is fine, attribute table and map are OK.

  - start a new project:
  - drop the osm file enclosed
  - choose "select all" button => the multipolygon layer is broken.

The shape of the multipolygon is modified when pan/zoom. The shape is displayed/not displayed when we zoom in/zoom out.
Moreover, the attribute table is empty (as you can see in my screenshot).

The show feature count is not working too (linked to #19461)
