

QGIS Application - Bug report #1951

Dragging tif/shape layer to QGIS canvas produces an error

2009-09-25 08:53 PM - Maxim Dubinin

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Rasters	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 12011
Description		
<p>If I drag a tif file from the file manager to open QGIS - it produces an error.</p> <p>http://gis-lab.info/images/screenshots/20090925-ex5-8kb.jpg</p> <p>I remember adding shapefiles worked this way, but not anymore.</p> <p>Even if this can't be fixed, the message should be altered to something less confusing as layer (data) is perfectly fine.</p>
