

QGIS Application - Bug report #19527

symbol selector dialog size

2018-08-02 09:25 AM - Jérôme Seigneuret

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	3.2.1	Regression?: No
Operating System:	windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 27354
Description		
<p>Hi,</p> <p>On QGIS 3 , 3.2 and 3.2.1 there is an erreur in evaluation size of windows screen. I join an exemple.</p> <p>My main windows resoltion is 1366x768</p> <p>Symbol selector is to big to access to bottom buttons.</p> <p>If I set symbol type on SVG marker:</p> <p>When I click on to windows to resize it, windows move to bottom and I can change it size. So I can just close windows with the cross button</p> <p>Possible solution can be oneliner elements for Size, Offset, Anchor point (in french "Taille", "Décalage", "Point d'ancrage")</p> <p>Other simple possibility : add right navigation bar in windows and fix max size to windows screen</p> <p>This problems is not only on these windows but that is the last case I see.</p>
