

QGIS Application - Bug report #19536

Boolean classify style not working

2018-08-02 07:21 PM - Christopher Wesson

Status: Closed	
Priority: Normal	
Assignee:	
Category: Symbology	
Affected QGIS version: 3.0.2	Regression?: No
Operating System: Windows 10 64-bit	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: No	Copied to github as #: 27363
Description	
<p>Currently using QGIS 3.0.2 Girona</p> <p>I have polygons with a Boolean field. If I try to colour them based on this field it colours them all with the 'all other' blank value. If I remove this then the polygons do not show.</p> <p>I suspect this is because the classification is searching for 'True' or 'False' whereas the Boolean field in the table is always '1' or '0'.</p> <p>Would be nice to get this fixed by LTR if its not already.</p> <p>Chris</p>	

History

#1 - 2018-08-03 11:03 AM - Giovanni Manghi

- Easy fix? changed from Yes to No
- Status changed from Open to Feedback

Just tested with a PostGIS table on 3.2, works as expected.

#2 - 2018-08-03 11:48 AM - Nyal Dawson

What layer type are you using? Can you share?

#3 - 2018-08-23 12:51 AM - Giovanni Manghi

- Resolution set to not reproducible
- Status changed from Feedback to Closed

Closing for lack of feedback.
