QGIS Application - Bug report #19567
qgz files not load
2018-08-08 12:11 PM - Evgeniy Z

Status: Closed
Priority: High
Assignee: Nyall Dawson
Category: Project Loading/Saving
Affected QGIS version: 3.2.1
Operating System: Windows 10 x64, Windows 7 x64
Pull Request or Patch supplied: No
Crashes QGIS or corrupts data: No

Description
I try to open *.qgz files from explorer or from qgis-bin but QGIS load empty project. After unzip qgz I try to open *.qgs - works fine.

My current version 3.2.3
If I save qgZ-project with Cyrillic symbols in filename, this project will not open.
It seems qgZ-project without Cyrillic symbols in filename opens normal.

- Related to Bug report #20562: all layers gone when reopen *.qgZ as User „Jörn“ added

#7 - 2018-11-26 10:46 AM - Jérôme Guélat

This is still happening with QGIS 3.4.1 when you use letters with accents like é, è, ä, ö, etc. in the filename.
This gives the impression that the QGIS project is corrupted if people don't know that they can unzip it.
