Pull Request or Patch Supplied:	Resolution:
Easy fix?: No	Copied to github as #: 27436
Description	
<p>As shown in the picture attached, we usually use a color ramp rather than a legend to label a raster DEM layer, so we need a color ramp item that users get a certain gradient symbol based on the selected raster layer. Then users design its aspect(vertical or horizontal), width, height, interval of ticks, number of ticks, and font of number label.</p>
