QGIS Application - Bug report #19668
Layers loaded from Browser are unusable

2018-08-22 12:13 PM - Andreas Wicht

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Browser			
Affected QGIS version:	3.2.2		**Regression?:**	Yes
Operating System:	Windows 10 / Ubuntu 18.04		**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	27493

Description

When loading a layer from the browser panel, the layer is not usable, as it is never being detected as "active layer".

It seems like the layer panel does not detect whether a layer is selected or not.

tested for
- *.shp
- *.gpkg
- PostGIS

In 3.2.1 / 2.18.23 this is not an issue.

Loading a *.shp file via drag&drop also does not show this issue.

History

#1 - 2018-08-22 12:14 PM - Nyall Dawson

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Fixed in master/3.2.3
