

QGIS Application - Bug report #19674

Method theme() of QgsMapCanvas not in sync?

2018-08-23 11:40 AM - Darius G.

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Python bindings / sipify		
Affected QGIS version:	3.4.3		
Operating System:			
Pull Request or Patch supplied:	No		
Crashes QGIS or corrupts data:	No	Regression?:	No
		Easy fix?:	No
		Resolution:	invalid
		Copied to github as #:	27499
Description			
iface.mapCanvas().theme() refers always to an empty string while user set map themes in the QGIS GUI interactively.

Connects to #19769

It is weird that `qgc.QgsProject.instance().mapThemeCollection()` can provide the list of map themes and can emit a signal when map theme changed but can not give the current/active/actual map theme. Also I found `applyTheme()` overcomplicated as I would expect to give the name as a single argument and see the theme changed.

I have installed latest QGIS 3.4 and I have noticed that the bug is still not solved in this version?

The main map canvas is "special" - it does not have map theme assigned. Instead when you pick a map theme, styles of map layers are modified according to the theme's settings. The theme attribute in QgsMapCanvas is used for other map canvases where user want to follow a specific map theme which is different from the current one.

So in fact this is not a bug, but I understand there's some confusion due to the way how the implementation works.

To figure out the current map theme (and that's how the map themes menu in qgis does it) is like this:

1. get the current state using `QgsMapThemeCollection::createThemeFromCurrentState(root, model)` (root and model come from `QgsProject::instance()`)
2. go through the map themes `QgsProject::instance()->mapThemeCollection()->mapThemes()` and for each have a look at their content `QgsProject::instance()->mapThemeCollection()->mapThemeState(name)` and compare it to the current theme's content

- *Status changed from Open to Closed*

Thank you very much for the feedback. I have implemented your procedure and it works.

#12 - 2019-03-01 07:58 PM - Giovanni Manghi

- *Resolution set to invalid*
