

QGIS Application - Bug report #19688

[Expression]Allow to remove custom functions directly from QGIS

2018-08-24 06:44 PM - Harrissou Santanna

Status:	In Progress	
Priority:	Normal	
Assignee:	Nathan Woodrow	
Category:	Expressions	
Affected QGIS version:	3.3(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 27513
Description		
<p>Using the Function Editor tab, you can create a Python function providing new expression functions to use. This function is stored in the user profile folder.</p> <p>It could be nice to be able to remove unneeded functions (because they were tests eg) directly from the Editor tab, either from a contextual menu or with a provided button. Currently, you need to go to the folder in which the file is saved (which is not a common/easy place to reach - I personally struggle to access the AppData folder on Windows)</p>		

History

#1 - 2018-10-11 07:56 AM - Nathan Woodrow

- Crashes QGIS or corrupts data set to No
- Assignee set to Nathan Woodrow
- Tracker changed from Feature request to Bug report
- Regression? set to No
- Affected QGIS version set to 3.3(master)

#2 - 2018-10-11 07:57 AM - Nathan Woodrow

| which is not a common/easy place to reach - I personally struggle to access the AppData folder on Windows

If you need to get the location from inside QGIS you can use the Settings -> User Profiles -> Open Active Profile folder..

#3 - 2018-10-15 01:48 AM - Nathan Woodrow

- Status changed from Open to In Progress

I have started working on this but have some issues with the QFile::remove not removing the file.
