

QGIS Application - Bug report #19702

Opening WFS in QGIS 3.2.2

2018-08-27 07:49 AM - Robert Richardson

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/WFS	
Affected QGIS version:	3.2.2	Regression?: No
Operating System:	Windows 10 64 bit	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: no timely feedback
Crashes QGIS or corrupts data:	No	Copied to github as #: 27527
Description		
Layers from WFS server http://www.mrt.tas.gov.au/web-services/wfs can each be opened OK in QGIS 2.18.14 but in QGIS 3.2.2 give errors and do not open.

Works ok for me, if I turn off the "Only request features overlapping the view extent" option. Can you confirm?

#2 - 2018-08-28 05:43 AM - Robert Richardson

Hi Nyal

I've tried deleting this WFS service and then adding it using Layer - Data Source Manager with the "Only request features overlapping the view extent" option not ticked. I am still having the same problem with the individual layers giving errors when each is opened. The error is generally similar to "Layer Airborne Geophysical Surveys of Tasmania (Mineral Resources Tasmania): Download of features for layer mrtwfs:AirborneSurveys failed or partially failed: Server generated an exception in GetFeature response: org.opengis.referencing.NoSuchAuthorityCodeException: No authority was defined for code "" . Did you forget "AUTHORITY:NUMBER"? No authority was defined for code "" . Did you forget "AUTHORITY:NUMBER"? . You may attempt reloading the layer with F5".

Hi Nyal

My apologies for not setting the assignee correctly yesterday. Please see my comments above. I think I need to come up with a simple example so you can see the basic project I am trying to add the layers to.

see attached images: there is something fishy (in the server configuration) about how the layers CRS's are advertised. Compare to how other services look like (in QGIS).

#5 - 2018-08-31 06:11 AM - Robert Richardson

I've successfully contacted the WFS provider (mrt.tas.gov.au) who had previously found a workaround for QGIS after other users had this same problem - the WFS version must be set to 1.0 not Auto. The same problem appears to apply to just about all the WFS servers for the Australian Geological Organisations listed here: <http://www.geoscience.gov.au/web-services>. I've been retired for about 6 years but it is possible that all these organisations are running versions of GeoServer that include support for GeoSciML.

A quick test showed that these services were OK with Gaia 3 but this appears to default to WFS version 1.0.

forcing the connection to 1.0 and the layers CRS's show as expected and layers are loaded.
