<b>Description</b>	
<p>I work on Windows 10 64 bit with QGIS 3.2.2</p> <p>When I use the vertex tool it will snap to all layers in the project. I have tried only to activate snapping on current layer and deactivated all other layers in the project but it still snaps to all notes so if I have a line following a polygon and I need to edit the polygon I will struggle to avoid the line even when I cant see it.</p>
